
The Governance Cadence Planner

A 90-day rhythm you can actually run, not another meeting nobody prepares for.

WHY A RHYTHM, NOT A FIRE

Founders stuck in firefighting mode fix problems all day, hold everything together, and secretly know they're the constraint. Operators don't chase every fire, they run rhythms. Daily huddles, weekly reviews and monthly check-ins give the team structure, clarity, and a place to raise issues before they explode.

The rhythm only works if it's kept short, focused and consistent, so it becomes part of how work happens, not another meeting layered on top of the ones you already have.

THE THREE LAYERS

Daily huddle: 15 minutes, same time every day Owner, priorities for today, what's blocked. Nothing gets solved in the huddle itself, blockers get named and taken offline.

Weekly review: 30 to 60 minutes, same day every week Two or three KPIs, what moved and why, one thing to fix before next week. This is where small inefficiencies get caught before they compound.

Monthly check-in: 60 to 90 minutes, same date every month Numbers reviewed whether or not anything looks wrong, capacity and bandwidth checked, one process reviewed in depth.

BUILD YOUR 90-DAY PLANNER

Fill in the owner and the standing agenda for each layer, then use the 13-week grid to mark that each cycle actually ran, not just that it was scheduled.

Daily huddle Time: __ Owner: __ Standing agenda: _____

Weekly review Day & time: __ Owner: __ KPIs tracked: _____

Monthly check-in Date: __ Owner: __ Standing agenda: _____

13-week tracker

WEEK	DAILY HUDDLE RAN?	WEEKLY REVIEW RAN?	ONE THING FIXED THIS WEEK	MONTHLY CHECK-IN (MARK MONTH END)

THE COMMON FAILURE MODES

- **Trying to fix everything at once.** Pick one layer to install first, daily huddle is usually the easiest place to start. Add the next layer once the first is running without you chasing it.
 - **Keeping exceptions for yourself.** If you bypass the rhythm, everyone else will too. The rules you set for the team apply to you first.
 - **Confusing visibility with micromanagement.** The point of the rhythm is that you can step back without losing sight, not that you get to interfere more often.
-

This is the same governance cadence VOS installs and tracks as one of its core deliverables, with the first cycle actually run, not just scheduled. [Take the free VOS assessment](#) or [book a discovery call](#) to build yours properly.
